

Racklive

You go Live! We are Racklive!

"Racklive is a division of ASA Computers, - ASA has been a bay area technology provider for over 25 years. Racklive is a wholly owned subsidiary of ASA founded over 5 years ago, by key members of the Rackable Systems team following the "reverse acquisition" of SGI by Rackable.

## About

Racklive, formed in 2011, is the data-center rack-level solutions focused division of ASA Computers, founded in 1989. At Racklive, we have assembled a team of top mechanical, electrical, and system engineers, production and project managers who work cohesively on datacenter projects from pre-deployment data center site surveys through field (post-shipment) deployment services to customizable customer support options.

For companies that want to control their own infrastructure and build their own clouds then there is no better Design & Build-to-Order company to take you to that last mile. Racklive is headquartered in the heart of Silicon Valley, providing us with not only the close proximity to our key technology partners, but also the access to many of the brightest and most experienced employees available.

We maintain the Racklive Lab at our Silicon Valley headquarters to be able to build, test, and stress new designs and configurations for our customers, and to create "Gold Standard" copies of key builds that customers deploy with us for future testing.

# Work We Do

## We **Design**

---

Racklive specializes in Design-to-Order and customized rack enclosures, servers and data storage products to optimize your business requirements.

## We **Build**

---

Racklive builds and tests our equipment at both the box level and rack level to the customer's specifications for two levels of quality assurance and system stability.

## We **Rack**

---

Racklive provides turn-key racks that are completely configured, racked, cabled, labeled, imaged, and tested for rapid deployment anywhere in the world as you want it.

## We **Deploy**

---

Racklive ship racks in custom crates provide field deployment services once the racks in custom designed crates are shipped and arrive at your datacenter. Services include: power-on, diagnostics, troubleshoot, break-fix and repair.

Racklive was founded on a clear mission to provide consistent, high-quality, custom Design-to-Order equipment and turn-key racks completely configured, racked, cabled, labeled, imaged, and tested for rapid deployment anywhere in the world as you want it.

## We **Support**

---

Racklive recognizes that every customer has different requirements for support options. Racklive offers customers complete flexibility to customize the Customer Support arrangement they need from the basic standard warranty to same day 4-hour on-site.

## Custom Solutions

Our custom solutions designed in close collaboration with our clients. These custom solutions range from our cantilevered hot aisle containment enclosure which was designed to simplify operations and maximize efficiency, one our unique chassis' designs, and our deceptively simple ground up four post rack enclosure.

You typically won't find us in trade shows, billboards or magazine ads. Our approach to doing business is generally best expressed via a chat with one of our loyal customers or when you run across our team first hand in a data center."

*" Racklive, a division of  
ASA Computers,  
designed custom racks  
that enabled their  
customer to stick 44  
cylindrical Apple Mac  
Pro workstations "*

Racklive is our full system division, in which we do Rack, Stack and Cable, crate and ship full system, roll in to data center and do the field deploy. Our team can assist in implementing a fully configured rack server for your business with ease.
